IT PAYS TO AVERY

AVERY COMPANY

PEORIA, ILL., U. S. A.

BRANCH HOUSES

Billings, Mont.; Grand Forks, N. D.; Fargo, N. D.; Aberdeen, S. D.; Sioux Falls, S. D.; Omaha, Nebr.; Sidney, Nebr.; Lincoln, Nebr.; Kansas City, Mo.; Wichita, Kan.; Des Moines, Ia.; Waterloo, Ia.; Davenport, Ia.; Minneapolis, Minn.; Madison, Wisc.; Indianapolis, Ind.; Columbus, O.; Stuttgart, Ark.; Sacramento, Calif.; Los Angeles, Calif.

DISTRIBUTORS

Avery Company of Texas, Dallas, Amarillo, Beaumont, Texas; Avery Machinery Company, Denver, Colo.; also other principal machinery centers. Western Canadian Distributors, Canadian Avery Co., Ltd., Main Office, Winnipeg. Branches at Regina, Calgary. Sub-Branch at Edmonton.

EXPORT REPRESENTATIVE

P. Aubeck, No. 3 Cedar St., N. Y. Peoria Cable Address: "Avery." Codes: Lieber's Regular and Five Letter, Western Union Regular and Five Letter, A. B. C. Fifth Edition, Bentley's and New Business Code.

INDEX

TRACTORS AND ATTACHMENTS

	Pages.
Tractors—8-16 to 45-65 H. P.	17-38
Tractors—5-10 H. P. and Six-Cylinder	43-46
Tractor Attachments and Hitches...	39-40
Motor Cultivators (One and Two-Row)	47-53
Skid Motors	42
Tanks—Water and Fuel	41

TRACTOR DRAWN MACHINERY

	Pages.
Rigid Beam Light Tractor Plows....	58-59
Indep'n't Beam Heavy Tractor Plows	60-61
Disc and Brush Plows.....	62-65
"Self-Lift" Listers	66
Tractor Disc Harrows.....	67
Tractor Grain Drills.....	68-69

TRACTOR DRIVEN MACHINERY

"Yellow-Kid" and "Yellow-Fellow" Grain Threshers..	70-89
"Yellow-Baby" Grain Thresher.....	90-91
Silo Filler and Corn Sheller.....	92-93

MOTOR TRUCKS

Six-Cylinder Avery Truck.....	54-57
-------------------------------	-------

IT PAYS TO AVERY-IZE - AVERY COMPANY, PEOR

Medium
Sized Tractors.

8-16 H. P. Avery Tractor.

Tractors.

12-20 H. P. Avery Tractor.

Motor Truck.

Avery Six-Cylinder
Model "C" Tractor.

Avery Motor Truck.

Large
Tractors.

18-36 H. P. Avery Tractor.

12-25 H. P. Avery Tractor.

Avery Model "B" 5-10
H. P. Tractor.

Special
Road
Tractors.

25-50 H. P. Avery Tractor.

14-28 H. P. Avery Tractor.

All Sizes.

45-65 H. P. Avery Tractor.

U.S.A. — A GOOD MACHINE AND A SQUARE DEAL

Threshers.

Avery "Yellow Baby" Thresher—22x32 inch.

Motor Cultivators.

Avery 4-Cylinder One-Row Motor Cultivator.

Skid Motors.

All Sizes.

Avery "Yellow-Kid" Thresher—20x30—24x36 inch.

Moldboard Plows.

"Power-Lift" Rigid Beam Light Tractor Plows.

Avery "Yellow-Fellow" Thresher—24x40—28x46—32x54—36x60 inch.

Avery Six-Cylinder Two-Row Motor Cultivator.

Disc Plows.

Avery Tractor Disc Plows.

"Self-Lift" Independent Beam Heavy Tractor Plows.

Tractor Tillage Tools.

Avery "Power-Lift" Lister.

Sanders Tractor Disc Plows.

Avery "Self-Adjusting" Tractor Disc Harrows.

Avery "Power-Lift" Tractor Grain Drills.

Avery Silo Filler.

Power for Every Size Farm and Every Kind of Work

IN the Avery Line of Motor Farming Machinery all the power requirements of every farmer in the world are filled. The Avery is the **one standardized, thoroughly proved, complete line of power farming machinery.**

You have your choice of small, medium or large tractors to exactly fit the work you have to do. Or you can get an Avery One or Two-Row Motor Cultivator—the most versatile machine made—to handle your row crops and do field and belt work as well.

Then you can get a complete line of power-operated Tractor Drawn Machinery to fit your tractor and thus make your plowing and tillage outfits economical "one-man" outfits.

There is also a complete line of Tractor Driven Machinery, including all sizes of champion "grain-saver" threshers and roller-bearing silo-fillers.

And, lastly, there is the Avery Motor Truck for quick hauling; also tanks, skid motors, etc.

For any kind of field work, belt work, road work or hauling, there is an Avery motor power machine that will do the work to your entire satisfaction, pleasure and profit.

tivator furnishes more economical power and is always ready for any kind of work. The tractor gives you power to plow deep and quick; power that is not stopped by hard ground, hot weather or flies; untiring power that will work long hours if necessary; and concentrated power that one man can handle and do the work of several men with a large number of horses.

The strongest point in favor of the farm tractor or motor cultivator is the **timeliness** with which the owner can do the work, whether plowing, discing, seeding, cultivating or harvesting, etc. Proper plowing at the right time—proper discing at the right time—proper seeding at the right time, and in the case of row crops, proper planting and frequent cultivation at the right time—all play their parts in increasing yields.

"Plowing used to scare me," one Avery owner wrote us, "but it does not **now**. Instead of wishing I had less to do, I look for more." That is the difference between farming with motor power and farming with animal power.

These are only a few reasons why motor farming is being practiced more and more each year—because motor farming is the **only real answer** to the many problems now confronting the modern farmer, and it is the **only solution** to the problem of having the power you need to do all your work in the right way and at the right time and thus raise bigger crops.

Many Avery owners have written us of the increased yields they have been able to raise with motor power. By plowing early and deep and putting the seed bed in the best condition, they report they have been able to reduce to a great extent the loss of moisture in their soil from evaporation. Then, too, they have been able to plow under Hessian flies, chinch bugs and other pests, so that they experienced little or no trouble from these sources. Many have reported an average increase per acre of 6 to 10 bushels of wheat, while others have written us that they were able to pay for their Avery outfit in one or two years' time out of the **increased yields alone**.

Motorized Farms Cost Less to Operate.

Only a short time ago farmers were spurred on by the incentive of good prices for their products. Now this situation has somewhat changed. The present problem is one of **how to reduce production costs** by the more efficient use of power, equipment and labor.

Whether the prices of farm products increase or decrease, whether the wages of farm labor raise or fall, the use of power farming machinery such as the tractor, truck, motor cultivator or thresher, will materially increase your margin of profit between cost of production and selling price.

"Will the use of power farming machinery save me money?" is a question which is frequently asked us by a prospect considering the purchase of a tractor, truck or motor cultivator. The answer is "Yes."

We have had many cases reported to us by Avery owners that they were able to cut their production costs down enough the first year to more than pay for their power equipment. Others have written us they have cut the cost of operating their farm down to about one-half the cost of doing the work with horses.

Among corn and cotton-belt farmers and others who raise row crops, it was at first difficult to cut farming costs to any great extent by the use of tractors, for the reason that they were compelled to keep enough horses to plant and cultivate their row crops. The success of the Avery Motor Cultivator has now, however, entirely changed this situation. First the tractor took the place of the **surplus** horses, and now the motor cultivator is taking the place of the horses formerly necessary to handle the row crops. And while we do not advocate the elimination of the horse on the farm **entirely**, yet with an Avery Tractor, an Avery Motor Cultivator and an Avery Motor Truck, it is not only possible to do this, but in many instances we know of it is proving to be a profitable combination to Avery owners who are operating "horseless" farms.

In considering the comparative cost of horse versus power farming, the expense of feeding idle horses stands out more clearly than any other. Farm horses work on the average only about 100 full days' time per year, but all of the other 265 days when they are doing nothing, they eat just the same as though they were working. When farming **entirely** with animal power, you feed about one-fourth of all you raise to your horses or mules. It takes the crops of five acres to feed one horse each year. **You can't turn a switch and stop them eating**, but with a tractor it is entirely different. A tractor, truck or motor cultivator **costs you nothing for feed when it is not working**, and when it is working it costs you less for fuel and oil to do the work than to do it with animal power. When using motor farming machinery you can sell all the grain that you otherwise would use in feeding horses, or you can use it for feeding profit-producing hogs and cattle.

Too many men are also required to farm with horses or mules, for one man can handle only a few horses with his own hands. This means additional hired help at high wages, if help can be gotten at all. Experience has shown that a tractor that will pull three fourteen-inch bottoms 6 to 9 inches deep operated by one man will do as much work in a day as two men and ten horses with the ordinary horse-drawn implements.

In figuring the comparative cost of farming with animal power and farming with motor power, the **initial investment**, the **up-keep expense** and the **depreciation** should all be taken into consideration.
