MANUAL PREVIEW

The Thieman tractor will handle two 14" plows with ease. Also used for disking, corn planting, two-row cultivator, grain binder, or any other implement for which four or five horses are required. Will run on 1 to 1½ gallons of gas per hour. It is rarely necessary to add any oil, if good oil is used, and the crank case needs to be drained and refilled only every three or four days of service.

Built to Stand Long Life Performance

Its design is extremely simple, making it easy and inexpensive to service. Equipped with Timken Tapered Bearings and Zerk Grease System throughout, the entire frame is electric welded—the world's strongest method of uniting metals. The frame is made of 4" tubular steel, combining lightness with strength, and the entire tractor is as free from castings as it is possible to make it, thereby doing away with excess dead weight, and assuring most economical operation.

Heavy Steel Roller Chains Run in Oil

The drive chains used in the Thieman Tractor are the best chains available for this purpose. They are made of highly tempered steel, with extremely hard rollers and pins. A straight side bar chain is used, which lessens the tendency of the sprockets coming in contact with them instead of running up on the chain rollers. The drive sprockets pressed on the Ford Model A hubs, are machined accurately. This method of mounting makes the sprockets run absolutely true, and at the same time, tends to place the load mostly on the inner and larger hub bearing—the outer hub bearing is installed so that with properly adjusted bearings, no strain is placed on the axle shaft, which prevents breakage of the axles in service. A cast iron designed drive chain case is used, into which is machined large bearing for the drive wheel axle, which makes it impossible for the chain case to tip and cause the chains to rub on the case, or wear into it. The chain cases are sealed tightly, and made in a simple four piece unit, doing away with any possibility of dirt or grit working into the case. Heavy Roller chains over case hardened sprockets, running in oil, are used for the final drive. This means less friction, longer life, and maximum efficiency from every gallon of gas used.

Buy A Thieman Tractor and Save the Difference

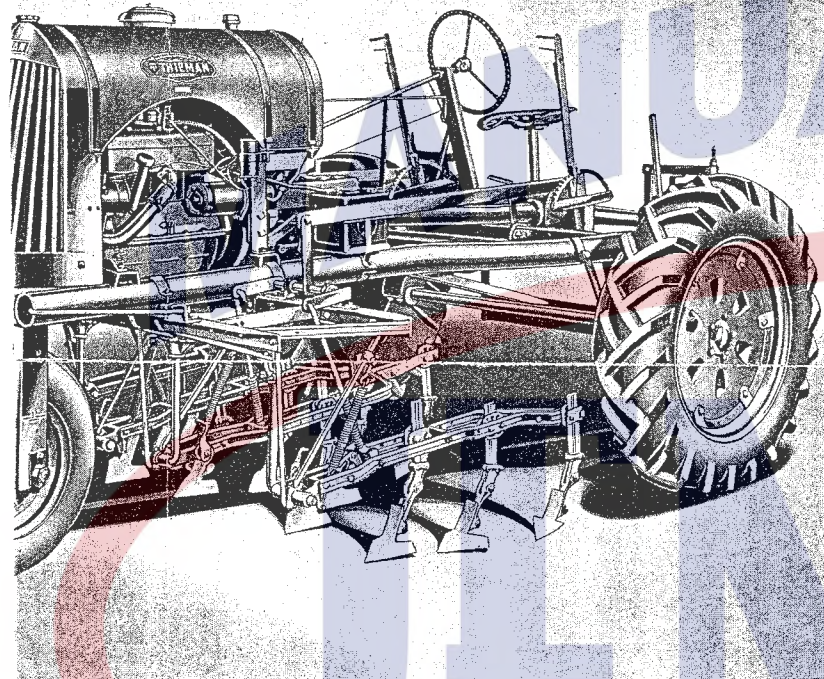

When you purchase a Thieman tractor you save from \$200.00 to \$500.00 over any other tractor and its equipment, with the result that in many cases your depreciation alone will pay for a Thieman the first year and your interest on the lower investment will go a long way toward paying for your fuel, thus your savings works two ways for you.

The Thieman tractor has been on the market for several years and replacement parts are lowest—another saving for you, another step toward prosperity in 1941 for you. High resale values of the Thieman tractor proves beyond a doubt how your investment is safeguarded by Thieman Harvester Co., in that every change so far we have made we have offered our owners of older tractors a SPECIAL EXCHANGE PRICE, so that their tractors could be brought right up to date at a very small cost—increasing the value or resale price of used Thieman tractors.

Every possible saving is offered you on a 1941 Thieman as well as every possible advantage of efficiency, performance, long life, together with lowest possible cost and lowest possible fuel economy. Buy a Thieman now and you are on the road to more prosperous farming.

World's Lowest Priced Tractor Offers Still Greater Values for 1941!

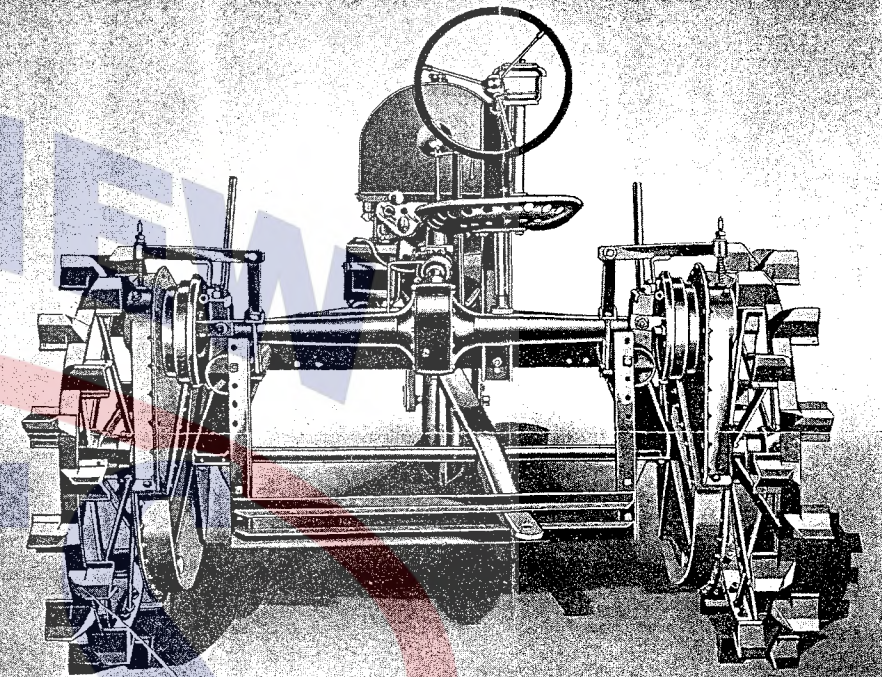

PATENTS PENDING

The Thieman tractor offers all economies and advantages of power farming at a saving never heard of before. It is an all around farm tractor that the average farmer can buy and can afford to operate. Its extremely low price is possible because of the Ford Motor Company's engine and parts exchange plan. The Ford Model A engine, reconditioned by the Ford factory, is recommended and used in its construction. The long wheel base is a special feature and a practical advantage which makes it possible to offer the farmer an extremely light tractor with power equal to other tractors with twice the weight. The drive axles are mounted 16 inches back of the main tractor axle. When the tractor is pulling, it raises the weight from the front of the tractor, and throws the weight onto the rear wheels—the harder the pull the more traction is developed. At the same time, the frame and distribution of the weight is so designed that there is always sufficient weight to give the front wheel the proper traction to guide easily. The long wheel base makes it possible to use almost any two row cultivator, without making any changes.

Exhaustive tests have been carried on here at the factory constantly, and this tractor in a few months has done more actual field work than the average farmer will do in 5 to 7 years, therefore, we know that the new 1941 Thieman tractor will give long life and outstanding performance on even a large farm and ask you to check up on the low costs of replacement parts.

The Thieman Tractor is Ideal for All-Round Field Work and Also on the Belt.

Another Saving of \$100.00 or More
When You Buy a Thieman

the Price of a Tractor Cultivator

It is not necessary to purchase a tractor cultivator, as you can use your own tractor as a cultivator by installing a simple attachment furnished for \$15.00. This attachment shows the cultivator mounted with attachment and using your own two-row cultivator. Farmers who have used the Thieman tractor will all say that it is by far the best tractor made for this purpose. The attachment is mounted under the frame to the front of the tractor and right in front of the front wheel. With the active steering mechanism on this tractor, it is easier to operate, and the operator is in a position to have a clear view of the field and conveniently watch the corn rows.

There is no danger of miring tractor down going through wet fields, as a heavy weight is eliminated, and sufficient clearance for the cultivator wheel special skid ring tire is furnished, which prevents picking up mud and clogging caster assembly in wet weather. Hand brakes are provided for making short turns. Numerous labor saving attachments are available which may be installed at a small additional cost, such as line drives, steering controls for owners who desire to use horse drawn implements and the implement seat. Also furrow plow guides, ridge levelers for lister attachment and saw attachments.

Pulley and Power Take-Off Attachment For Model A Motor

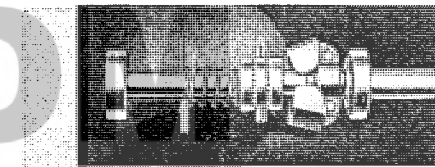

The Thieman Tractor using a Model A Ford motor, can be equipped with a pulley and power take-off at a small additional cost, which takes care of all belt problems on the farm. Power Take-Off to be used on any implement requiring a power take-off. Guaranteed to have as much power in belt and power take-off as any two-plow tractor on the market.

Adjustable Swinging Draw Bar

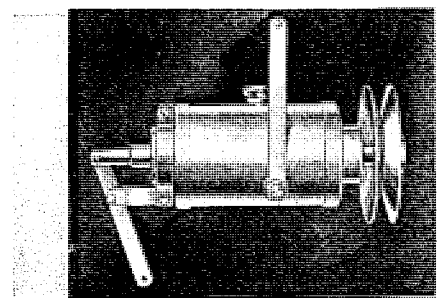

The pull of the draw bar is on the center of the frame. It is connected to cross member of the tractor frame upward and ahead of main axle, 30 inches, so when turning with tractor pulling a load, such as discing, harrowing, etc., the draw bar will pull front end of tractor in same direction as you are turning, thus eliminating use of brakes. The draw bar is designed so that it can be adjusted upward or downward or can be locked in any position. The draw bar arrangement on the Thieman tractor is an outstanding feature which has greatly increased the traction and performance.

The Thieman Governor is the Most Efficient on the Market Today!

It has been said that the governor on the tractor is 25% of the tractor itself by noted tractor engineers and our governor is our own make and by actual tests proves itself to be outstanding both in performance and long life.

Thieman Governors Are Fully Guaranteed.

Runs in Constant Oil Bath on Finest Bearings.
